

Heat Resilience Project Metrics

Tracking key performance indicators will help you understand the impact of your heat resilience projects.

Ongoing measurement will enable you to modify policies and interventions as needed to increase impact and progress toward your goals.

Indicators may broadly include health, awareness, and temperature, among others.

Awareness

- Knowledge about heat and how to stay safe
- Observed behavior change

Health

- Heat illness counts
- Hospitalizations
- Heat-related or all-cause mortality

Tree canopy cover

Albedo (solar reflectance)

Temperature

Access to resources (including air conditioning, cooling centers, and more)

Co-benefits, including air quality, increased physical activity, and more.
