Tracking key performance indicators will help you understand the impact of your heat resilience projects. Ongoing measurement will enable you to modify policies and interventions as needed to increase impact and progress toward your goals. Indicators may broadly include health, awareness, and temperature, among others.

### Health
- Heat illness counts
- Hospitalizations
- Heat-related or all-cause mortality

### Awareness
- Knowledge about heat and how to stay safe
- Observed behavior change

### Access to resources
- Including air conditioning, cooling centers, and more

### Co-benefits
- Increased physical activity
- Improved air quality

### Tree canopy cover

### Albedo (solar reflectance)

### Temperature
